

Genesis Layer 0

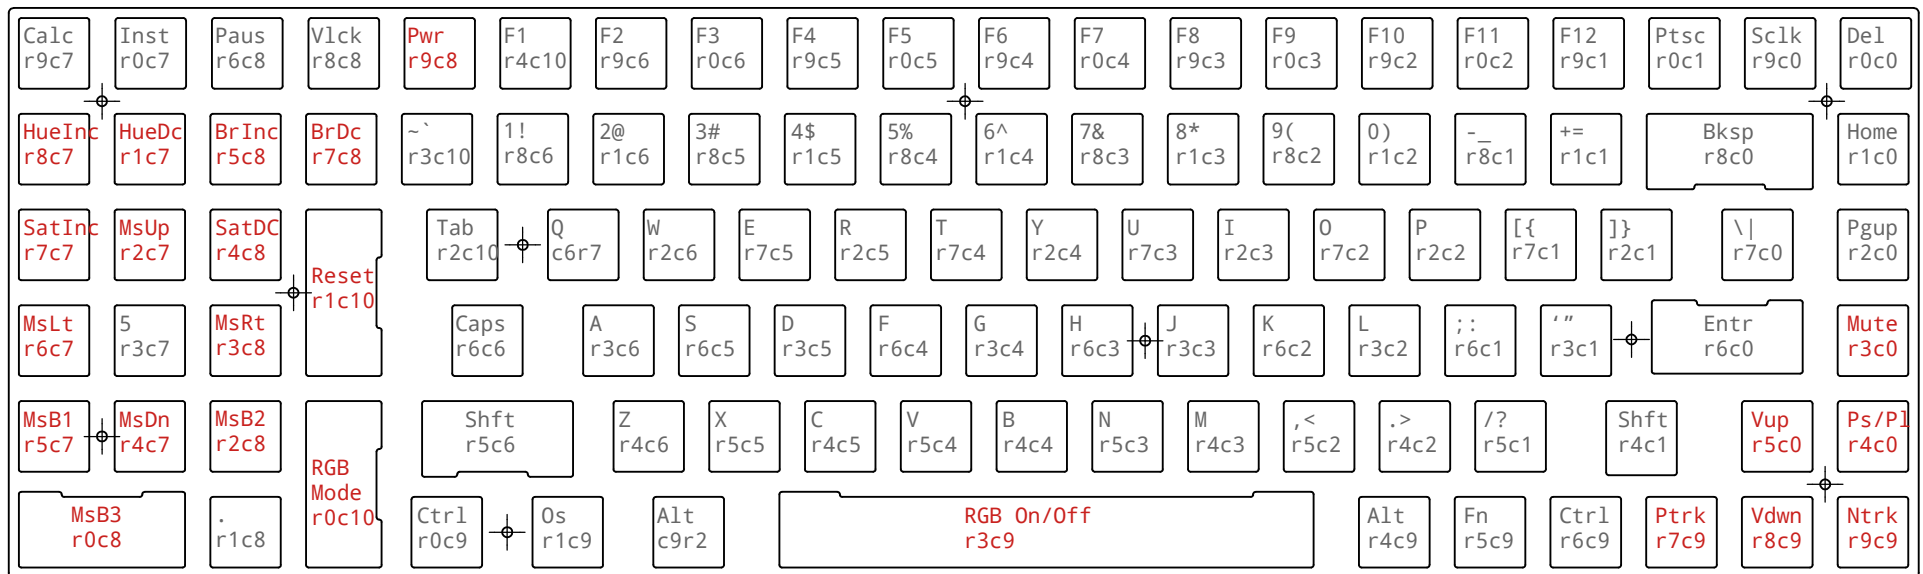

Check QMK Keycodes for key descriptions.

****Vlck repeats the next keystroke until interrupted by the same keystroke again****

Genesis Layer 1

Keys highlighted in red are active in this layer, while grayed out are transparent

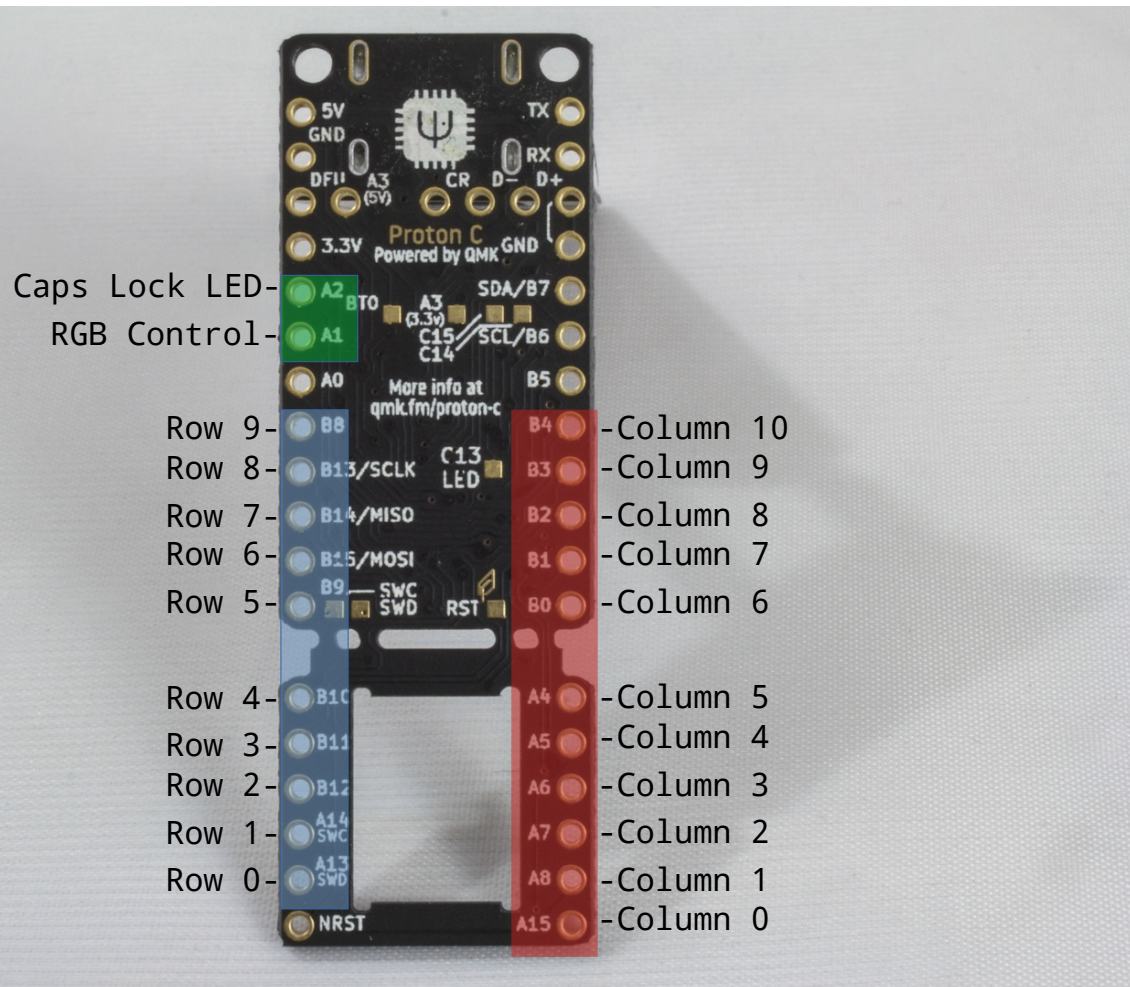

ProtonC Pinout

Red - Columns Pins

Blue - Rows Pins

Green - Light Control Pins

Handwiring Guide (10 rows and 11 columns)

Red - Columns, wire these first

**Start top right and move to the left, then move to the space bar row, last connect the 5 rows in column 10

Blue - Even Rows

Green - Odd Rows

**The rows alternate

Start on the top row and connect evens to evens(ex:r0), then odds to odds(ex:r9); that is two complete rows. Follow this pattern through column 6. Then jump around in ascending order of columns connecting each row number together. Make sure to wire column 10 last.
